

# The Scrubber Dryer is Evolving

**MOTORSCRUBBER** have pioneered in deep cleaning small spaces for over 14 years, the 'Small machine with BIG POWER' has become the go to professional tool for deep cleaning all the hard to reach areas the larger machines cannot reach.

## How was FORCE born?

Commercial buildings need a cleaning machine with large tank capacities, large battery capacity and industrial build quality able to withstand the rigorous daily cleaning of large open areas. Many Manufacturers have fulfilled these user demands, however, there remains one challenge, we have discovered that most scrubber dryers are only cleaning up to 85% of large floor surfaces, leaving many areas untouched on the first pass. This means the cleaning operative must return to the cleaning cupboard to retrieve a second smaller machine, fill the tanks, charge its batteries, or even worse, fill a mop bucket and erect wet floor signs waiting for the areas to dry, before returning the equipment back to the cupboard. Consequently, this wastes huge amounts of time and the end result is often poor cleaning performance on the remaining 15% of areas, which are equally important to your company's image.

In our example right, the blue areas highlighted are cleaned by a scrubber dryer, but how are the red areas cleaned? Since 2016, we

have been developing 'MotorScrubber FORCE', a Worldwide patent pending, award winning, super heavy-duty accessory tool to fit onto any medium or large scrubber dryer. By adding Force to your scrubber dryer you can now machine clean and dry 100% of the floor. Under benches in transport terminals, under production lines in factories as well as in and around secure fixtures in washrooms.

The major advantage is that Force connects to your large scrubber dryer using one special hose. Within the hose we connect Force to the large scrubber dryers batteries, clean water tank and suction. This makes Force so easy to use, you don't have an additional battery to charge, or tanks to fill and empty, all of this is done on your large machine as routine.

Force offers more advantages; you can clip

off the tool in seconds, meaning you can clean the small spaces as you pass them with your scrubber dryer and no more down time going back to the cleaning cupboard to grab a mop or smaller machine. Force delivers industrial cleaning performance on a small scale, achieving the same cleaning result as the larger scrubber. Designed and built in Sheffield, England, every single component is specially selected as the most durable component available; where added strength is needed, we use cast or machined aluminium to create an industrial grade tool to be used by professionals.

Force is extremely well priced, costing less than buying a smaller scrubber dryer to clean those small areas and can be fitted in less than 30 minutes by a trained technician, through our network of approved partners.

MotorScrubber FORCE - Clip on - Clip off - Clean Anywhere!

We would love to show you how MotorScrubber FORCE can save you time, money and vastly improve hygiene in your building, please arrange a Demo by visiting [motorscrubberclean.com](http://motorscrubberclean.com), email [force@motorscrubberclean.com](mailto:force@motorscrubberclean.com) or call 0114 478 8710
