

1 System Description

1.1 Appearance

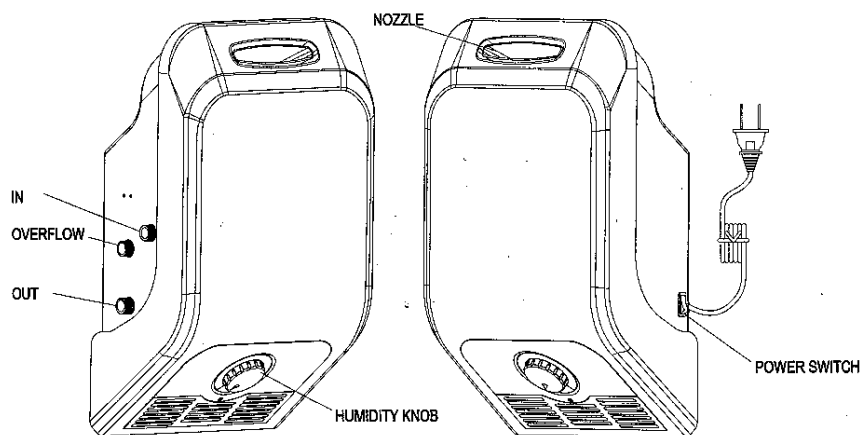

Chart 1 Product Appearance

1.2 Product Features

A Large Space & Systematization

Single use for large space of 300m³ (S: 100 m² H: 3m), combined use as a humidification system for larger space.

B Large Mist Output & Ultra-fine Mist Particle Diameter

Mist output as high as 1600ml/h to ensure the humidification effect for large space; ultra fine mist particle diameter (D50: ≤5μm) with high gasification rate up to 80% to enhance humidification effect.

C Free Refill Water

Connect to water supply directly ,free refill water,more convenient.

D Intelligent Auto-control & Safety Protection

With built-in hygrostat,can adjust environment humidity(20%-100%) based on demands,intelligent induction of environment humidity,can auto stop humidifying when humidity reach setting humidity and re-work when below setting humidity.

E Safety Protection

- Overflow Protection-water discharged through overflow pipe when water inlet valve is damaged.
- Shortage Protection-Auto stop working when water shortage.

F High Efficiency & Energy Saving

Ultra fine mist particle diameter (D50: ≤5μm) ,mist transmission distance up to 3.5m,high gasification rate up to 80%,power consumption of 120W,save water and energy.

G Antibacterial & Healthy

The chamber adopt silver ion antibacterial technology for hygienic mist

H Simple Installation

Wall-mounted installation,push-fit connector for plumber fast installation,a humidification system for 2000m² can be done within only one day.
